

SN Candy Meal

A blend of chocolate, pasta, cereals, crackers, cookies, breads, sugars, nuts and other foods

What is SN Candy Meal?

SN Candy Meal is a carefully formulated blend of chocolate, pasta, cereals, crackers, cookies, breads, sugars, nuts, and other food ingredients, milled with agricultural commodities to create a high-energy feed component. Rich in energy and fat, it serves as an effective replacement for corn, cottonseed, and molasses. This consistent, high-quality product has been proven to deliver outstanding results in beef cattle, dairy cows, and swines, supporting optimal growth and performance.

It can be substituted pound for pound with cottonseed, providing a reliable and nutrient-dense alternative. In beef cattle, it has been proven to enhance average daily gain (ADG), while in dairy cows, it supports increased fat and protein levels, along with higher dry matter intake (DMI). To maintain its consistency and quality, we conduct regular testing and monitoring, ensuring optimal performance in every batch. Its high palatability ensures cows are more likely to consume it, optimizing feed efficiency. Additionally, Candymeal is an excellent way to utilize food industry by-products, promoting sustainability while supporting animal nutrition.

Key Features & Benefits

Crude Protein:	12% (Min)
Crude Fat:	9% (Min)
Crude Fiber:	10% (Max)

Additional benefits include:

- **High Energy & Protein** – Rich in digestible sugars and proteins to enhance energy intake and overall cow health.
- **Boosts Production** – Supports increased milk yield in dairy herds and promotes weight gain in beef cattle.
- **Highly Palatable** – Encourages greater feed consumption, optimizing feed efficiency.
- **Sustainable Solution** – Utilizes food industry by-products, reducing waste while supporting animal nutrition.

Handling and Storage: Protect from moisture.
